

Finder launches a brand new range of 25A modular contactors

Thanks to the integration of its coil circuit design and mechanical contact circuit design, the contactors have a particularly quiet operation. This makes the brand new **22 Series** especially suitable in places such as hotel rooms, hospitals, libraries etc.

The Series comes in 2 or 4 contact versions, and with different configurations:

- 2 or 4 normally open contacts (2 NO or 4NO)
- 2 normally closed contacts (2 NC),
- 1 normally open and 1 normally closed contact (1 NO + 1 NC)
- 2 normally open plus 2 normally closed contacts (2 NO + 2 NC)
- 3 normally open contacts plus 1 normally closed contact (3 NO + 1 NC)

The contactors are suitable for AC or DC operation, in voltage ranges from 12 V to 230 V, with mounting on 35mm rail.

Auxiliary modules with 2 NO or 1 NO + 1 NC contacts can be attached to all versions. These modules are easily installed and can be used for remote monitoring or supervisory purposes.

The new 22 Series is supplied as standard with a mechanical indicator and LED, but is also available with an Auto-On-Off selector for applications requiring this feature.
